

Minimising your environmental impact, carbon footprint and energy consumption is not just the right thing to do. It is the way to maximise the effectiveness of your organisation because:

- It helps to create a culture where your staff feel valued and contribute more;
- It ensures compliance with environmental legislation, which may keep you out of jail, or least save you a large fine!
- It will demonstrate your values to the staff and may improve retention of key staff;
- It should boost your brand reputation with customers- or at least protect it from harm.

The GREEN toolkit provides you with learning about how to reduce your environmental impact, carbon footprint and energy consumption, a measure of how well you manage environmental and energy issues now and the means to improve in the future. Along the way it will generate evidence that will protect your reputation and provide evidence in case of legal challenges

Who is this for?

- Consultants
- SMEs
- Larger businesses with supply chains
- Professional services firms

What does it cover?

- Environmental impact
- Energy costs
- Risk assessments
- Costs and benefits

Value added features:
